

# TRUHARD FLOOR TOP HARDENER

# Premixed Non-metallic mineral based floor hardener

**Overview** A pre-blended, easy to use dry shake powder for concrete floors and toppings. TruHard FTH results in a hard, dense surface which resists corrosion and absorption of grease, oils and most of the chemical stains.

- **Key Features** Ready to use, Just add water.
  - Easy mixing and application
  - ♦Non-metallic Rust free
  - Monolithic hardening
  - ♦ Ready to Use and Economical
  - ♦ Offers a non-slippery surface
  - Provides high impact resistance
  - High abrasion and impact resistance
  - Formulated with locally sourced minerals
  - ♦ Contribute to LEED points

Standards/ IS 1237: 1980\*

Test Methods Note: FTH has been tested as per the above mentioned Test methods

Areas of<br/>ApplicationRecommended for use on floors subjected to severe mechanical or hard wearing surface<br/>coverings, such as

- ◆Loading and unloading bays,
- ♦ Floors in airport and customs hangars.
- ◆ Floors in Industrial environments,

♦ Warehouse, Factories, Public areas, car parks, Museums, Garages, Service Stations and outdoor surface of all kinds.

Note: Contact Our Technical Services for recommendations.

Installation Surface/Base Concrete Preparation

• The floors/Concrete Surfaces should be sound in order to withstand future mechanical stress.

• The aggregate used should be properly sized and graded.

•The concrete should have a cement content of 300 kg/m3 for concrete and 400 kg/m3 for screeds. Ensure the concrete surface has been treated properly before installed the screed.

• Surface to which the FTH being used should be pre-levelled with a suitable trowel.

# Floating Application

The Scattering of the FTH powder over the surfaces should be conducted in two stages in a perpendicular direction to achieve uniform coverage and finishing

♦ Scatter around 60 % of the required FTH powder at the first step over the freshly laid concrete surface. Allow Sufficient time for FTH for the moistening. Observe the scattered powder turning to a dark tone.

♦ Spread/Sprinkle the remaining 40% of the powder after 30 to 45 min and float the surface mechanically using a power floater to achieve a desired finishing of the surface.

• Ensure the trowel does not cause any damage to the laid surface.

#### Warning

♦ Earlier application can cause the FTH to sink. On the other hand, delayed application results in poor/uneven surface.

◆Ensure the user follow proper application methodology.

### Protection

•Water curing by ponding is recommended for 7 days.

- Immediately after use, equipment and tools should be cleaned with clean water
- Avoid contact with eyes and prolonged contact with the skin.

♦ Care should be taken to avoid inhalation or ingestion of dust and prevent contact with the eyes

Technical Data (typical values)		
General		
Bulk density (kg/m <sup>3</sup> )	1325	
Dry Solid Content	100	
Туре	Ready to Use Powder	
Base	Natural aggregates, Portland Cement and additives	
Performance		
Parameters	Test Method	Typical Values
Abrasion resistance (mm)		
Low Duty	IS 1237:1980	0.20
Medium Duty		0.13
Heavy Duty		0.09
Mohs Scale Hardness		6-7
Coverage (kg/m <sup>2</sup> )		
Light to Moderate Duty	Internal test method	2.5 to 3.5
Moderate to Heavy Duty		3.5 to 5.0
Super Heavy Duty		5.0 to 7.5

Packaging &TruHard Floor Top Hardener is available as 25 kg bag.Shelf LifeColour: GreyHas a shelf life of 12 months from the date of Manufacturing when stored in a dry, elevated area in the original unopened packaging

Warning!Keep out of reach of Children.<br/>Product for Professional Use<br/>Wear Suitable protective clothing, gloves while handling<br/>For Clarifications and Usage related queries, Contact our Technical Services
